Your answer

This can contain, Biased responses, untruthful responses, but are inexpensive?

Your answer

Students in a large statistics class were randomly divided into two groups. The first group took the midterm exam with soft music playing in the background, while the second group took the exam with no music playing. The scores of the two groups on the exam were compared. Which of the following is a reason this experiment is NOT blind?

- ☐ Students were allowed to keep their eyes open while taking the exam.
- ☐ The exam was too long.
- ☐ The students know whether or not music was playing while they were taking the exam
- ☐ Some of the students did not study for the exam.
- ☐ Students were randomized into the two groups

In an experiment to see if aspirin reduces the chance of having a heart attack, a placebo is:

- ☐ the place where the subjects go when they have a heart attack.
- ☐ probably administered to the control group.
- ☐ a procedure for deciding who is going to get the aspirin treatment
- ☐ the randomization procedure.

Researchers compare the rates of autism for children who did and did not receive the standard measles-mumps-rubella vaccine, to see if the vaccine might be responsible for autism in some children.

- ☐ prospective observational study
- ☐ retrospective observational study
- ☐ survey
- ☐ experiment
